Full Stack Software Engineer and UX/UI Designer | Founder, Return It

St. Louis, MO | 636-214-7701 | nabeelmumtaz92@gmail.com | github.com/nabeelmumtaz92

Ask me about: taking a 1,000+ test suite from 87.1% to 99.79% pass rate · writing 140 patent application drafts for my own startup · going from UX design to shipped, tested product as a team of one.

PROFESSIONAL SUMMARY

Full Stack Software Engineer and UX/UI Designer with 4–6 years of experience building and shipping production web, mobile, and cloud applications. Google UX Design Professional Certificate. Founder of Return It (live reverse-logistics marketplace with a 1,000+ driver network), FleetFuel (native iOS app delivering automatic cashback on fleet fuel purchases), RishtaAunty (safety-first Muslim AI matchmaking app), RepRewards (iOS + Apple Watch rep tracker), Parallel (AI that multitasks in parallel), and Portal (real-time remote desktop streaming), among others. Skilled in React, TypeScript, Python, Java, Node.js, PostgreSQL, and AWS — hands-on owner of architecture, development, deployment, and product strategy from concept to live product. Completed the Evaluating AI Agents course (DeepLearning.AI) and applied AI evaluation and deep learning methods across each startup — Return It, FleetFuel, RishtaAunty, RepRewards, and Parallel.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, React Native, HTML, CSS, Redux, Hooks, Context API, Jest, Cypress, Axios, Yup

Backend: Node.js, Express, RESTful API Design, API Development, Docker

Databases: PostgreSQL, SQL, Database Design, Schema Design, Data Modeling

Cloud & DevOps: AWS (EC2, S3, IAM, Route 53, CloudFront), CI/CD Pipelines, GitHub Actions, Vercel, Heroku, Netlify

AI & Product Engineering: OpenAI API, Claude API, Gemini API, Prompt Engineering, AI Workflow Automation, AI Copilots, LLM Integrations, AI Developer Tools, Code Generation Systems, Product Development, MVP Development, AI Evaluation, Deep Learning

Algorithms & Data Structures: Actively completing the NeetCode 150 (LeetCode) — pattern-based practice across arrays/strings, sliding window, stacks, trees/graphs, and dynamic programming for technical interview preparation

PROJECTS

Return It, LLC — Founder, Full Stack Developer | *React | React Native | Node.js | PostgreSQL*

- Architected and built a full-stack reverse logistics platform spanning ~365,000 lines of code across TypeScript/React/SQL (414 backend files, 325 React components, 25 SQL migrations), backed by a 160-table PostgreSQL schema (Drizzle ORM) covering orders, driver payouts, tax/1099 filings, and fraud detection.
- Built and maintain 657 REST API endpoints across 18 Express route modules, plus 43 scheduled/cron jobs automating retailer discovery, policy scraping, payouts, and daily operations reporting across 9 metro markets.
- Own a 1,000+ test Playwright E2E suite (46 spec files covering payments, auth, order lifecycle, and admin flows); root-caused every failure cluster and drove the pass rate from 87.1% to 99.79% by fixing underlying app bugs — including a live-reproduced concurrency crash and a privilege-escalation vulnerability.
- Identified and closed multiple production authorization vulnerabilities, including an endpoint that let any authenticated customer self-grant driver access with no background check, and an unauthenticated W-9/tax-document route.
- Shipped 3 native mobile apps (customer, driver, master-admin) via Expo/EAS to TestFlight and Android, plus a 168-page web app including a 44-page internal admin/operations dashboard.
- Integrated 8 AWS services (S3, SES, SNS, Rekognition, Location, Connect, EventBridge, Step Functions), Stripe, Twilio, and multiple LLM providers (Anthropic, OpenAI) with automatic cross-provider failover.

Portal — Remote Desktop System (Personal Project) | Swift | SwiftUI | UIKit | Node.js | WebSockets | H.264 | WebCodecs | macOS Accessibility APIs | Tailscale

- Built a real-time remote desktop system streaming a Mac's screen to an iPhone app and any laptop browser at 1080p up to 60 fps, with full mouse, keyboard, and clipboard control.
- Designed a low-latency pipeline that captures the screen with ffmpeg, encodes H.264 on the Mac's hardware encoder, and sends each frame over WebSockets as soon as it's encoded; decoded in hardware on iOS (AVSampleBufferDisplayLayer) and in browsers (WebCodecs).

- Built round-trip probing and adaptive-bitrate congestion control that skips to the next keyframe instead of falling behind — worst-case lag fell from 7.3 s to 2.1 s on a simulated 1.5 Mbps connection.
- Cut reconnect time from ~800 ms to ~6 ms on the local network by keeping capture warm and caching frames since the last keyframe.
- Built the iPhone app (SwiftUI/UIKit) with touch and trackpad input modes, pointer acceleration, momentum scrolling, and pinch-zoom that follows the pointer; the iPhone keyboard opens automatically when a Mac text field gains focus via a native Swift helper reading the macOS Accessibility API; supports two-way clipboard sync and multi-monitor switching.
- Shipped an installable browser client that maps Windows shortcuts to Mac equivalents (Ctrl → Command); secured public access through Tailscale Funnel with constant-time token checks, per-device lockout after repeated wrong codes, and strict remote-input validation to prevent command injection.
- Deploys as a macOS background service (launchd) with over-the-air iOS distribution (itms-services) and in-app update checks, so installs and updates need no cable and no App Store.

PROFESSIONAL EXPERIENCE

Return It, LLC — Founder & Lead Engineer *2025 – Present*

- Lead end-to-end product, engineering, and operations for a live reverse logistics marketplace, solo-engineering 3,143 commits over ~13 months (Aug 2025–present) across backend, frontend, mobile, and infrastructure.
- Recruited, onboarded, and manage a driver network of hundreds across multiple U.S. markets, building dispatch, scheduling, and support workflows around real operational constraints.
- Own all technical decision-making, infrastructure, and vendor/payment integrations (Stripe) as sole technical founder — accountable for uptime, security, and product roadmap with no engineering team to delegate to.
- Authored 140 patent application documents/drafts supporting the company's intellectual property portfolio.
- Designed the iOS customer app in Figma (four finished screens, full user journey mapped) alongside the engineering — the UX case study is live on my portfolio.

FleetFuel — Founder & iOS Engineer 2026 – Present

- Built a native iOS app (Swift/SwiftUI) delivering automatic, real-time cashback on fleet fuel purchases — drivers connect a company fuel card once via secure tokenization, and every fill-up is detected, tracked, and rewarded with no further action.
- Shipped an MVP with a transaction feed (date, station, gallons, price per gallon, total; search and filter by station), spending dashboards with period-over-period trends and budget tracking, and savings recommendations identifying cheaper nearby stations from historical fill-up patterns.
- Roadmap: live WEX/Comdata/Fuelman integrations (Phase 2), then gig-economy and consumer expansion.

RishtaAunty — Founder & Engineer 2026 – Present

- Building a safety-first Muslim AI matchmaking app centered on an AI “rishta aunty” (Claude Haiku) that conducts conversational onboarding interviews, produces structured profiles, and sends daily curated match proposals with plain-language compatibility explanations across 10 dimensions.
- Grounded the compatibility model in academic research, interviews with experienced rishta aunties, and community data; criteria exclude skin-tone, weight, and caste biases.
- Designed double opt-in introductions with screened notes and silent declines, pre-delivery AI message screening, selfie verification, and a strike system to enforce safety.

RepRewards — Founder & Engineer 2026 – Present

- Building an iOS + Apple Watch app ("the step counter for strength training") that validates gym reps passively — accelerometer, physiology, and heart-rate signals must all agree before a rep counts.
- Designed a rewards loop around weekly affiliate-funded gift cards: 30 reps earn 1 point, with a 50-point weekly goal.
- Wrote the product spec, nine technical briefs, and a validation plan; UX case study and Figma designs in progress.

Parallel — Founder & Engineer 2026 – Present

- Designing an AI that multitasks in parallel: one message with one task per line, every task executed at once, answers returned together with a quiet line on the time saved.
- Architected the concept around an open-source model on local hardware — no third-party AI brand, no sign-in, no API keys; a familiar chat-style interface (the AI is the product, not the chat UI) with five interaction states, prototyped in Figma Make.
- Specified the savings math honestly for shared local hardware (parallel time = longest task, sequential = sum of tasks) so the design’s claims stay calibrated to real constraints.

Target — Tech Consultant *Sep 2025 – Dec 2025*

- Advised customers on consumer electronics purchases, product specifications, and warranty/protection plan options within the Electronics department.
- Managed inventory stocking, product displays, and point-of-sale operations to support department sales goals.

Chesterfield Valley Psychiatry — Office Manager *Dec 2019 – Dec 2024*

- Coordinated with IT to implement and upgrade Electronic Health Record (EHR) systems, driving a 40% improvement in productivity and strengthening data security.
- Implemented a database management system for client records, improving data accuracy by 25% while maintaining HIPAA-compliant privacy protections.
- Overhauled office operations and vendor/inventory management, increasing operational efficiency by 20% and reducing overhead costs by 15%.

Zion Luxe, LLC — Founder & Technical Lead *2020 – 2022*

- Built and launched a digital booking and payment platform automating travel coordination and backend processing, including a proprietary in-house flight search engine.
- Scaled early business growth through technical optimization, contributing to $40K in first-month revenue.

Kiosite — Intern *Sep 2019 – Dec 2019*

- Owned product management for HireTrue, improving the user interface, adding Missouri state-required functionality, and transitioning the platform to fully self-service.
- Researched job board and company assessment platforms for partnership/acquisition opportunities, and developed occupation-specific feedback for job seekers and employers using Talify and HireTrue.

EDUCATION

BloomTech — Full Stack Web Development Program | 2024–2025
American University of Antigua — Medical School, Completed 2nd Year Coursework | 2022–2024
Columbia University in the City of New York — Master of Science, Human Nutrition | 2014–2015
Illinois Wesleyan University — Bachelor of Arts, Psychology | 2010–2014

RESEARCH

Columbia University — Master's Thesis (Microbiology)

- Led independent research applying data-driven analysis, experimental design, and hypothesis testing, developing analytical and systems-based problem-solving skills now applied to software engineering.

CERTIFICATIONS

Google UX Design Professional Certificate • AI Fundamentals (Google, via Coursera) • AWS Cloud Essentials • AWS Solutions Architect Coursework • Google Project Management Professional Certificate • Programming with JavaScript (Meta) • Introduction to Front-End Development • Evaluating AI Agents — DeepLearning.AI

LEADERSHIP & ACTIVITIES

- Former Collegiate Football Player — Free Safety, Illinois Wesleyan University; All-State First Team, high school team captain.
- Trained boxer (orthodox stance).
- Languages: Urdu (Native), Hindi (Advanced), Arabic (Intermediate), Spanish (Conversational).
